

Education: QA Engineer trained at **TripleTen** with experience in **Real-world scenarios and simulated production environments**. Ensuring the **stability of critical systems** and the **integrity of sensitive data**.

Experience: in **Web and API platform testing**, (end-to-end, regression, integration). Applies **black-box techniques—boundary value analysis, equivalence partitioning, and negative testing**—to detect vulnerabilities before they impact the business. Manages defects with **Jira** in **Agile** environments, facilitating bilingual technical communication between teams.

Soft Skills: Discipline, analytical thinking, attention to detail, orientation towards **maximum precision and risk mitigation**.

Technical Skills

- **Functional Testing:** End-to-end, Regression, Smoke Testing, Integration.
 - **API Testing:** Postman (collections, assertions, environment variables) REST/GraphQL validation, contract and security testing.
 - **Black-Box Techniques:** Boundary Value Analysis (BVA), Equivalence Partitioning, Negative Testing.
 - **Data Testing:** Data integrity validation, transactional consistency, and sensitive data handling.
 - **Quality Management:** Jira (defect reporting and life cycle), Agile/Scrum.
 - **Mobile Testing:** Android Studio (emulators and debugging).
 - **DevTools:** Request analysis, frontend debugging, basic performance analysis.
 - **Version Control:** Git/GitHub (branching, commits, pull requests).
 - **Python:** Scripting for automation and data manipulation.
 - **Web Automation:** Selenium WebDriver.
 - **Pytest:** (framework) for Python testing that allows writing clean, readable, and scalable test code.
 - **SQL:** Complex queries, referential integrity validation, and dataset analysis.
 - **Web Technologies:** HTML, CSS, JSON (structure validation and parsing).
 - **Linux/Terminal:** Log navigation, script execution, basic server administration.
 - **Languages:** Spanish (Native), English (Professional, technical support and documentation).
-

Projects

Web Application - Urban Scooter | TripleTen | 2025

- **Comprehensive Mobility Platform Validation:** Performed comprehensive **validation of the scooter rental lifecycle** in the Urban Scooter application (**Web, Mobile APK, APIs and SQL**). My primary focus was to ensure data integrity, **state synchronization**, and a reliable **user experience** within a mobility ecosystem.
- **Strategic Test Design and Execution:** Designed and executed **327 test cases** covering **critical flows** such as **user registration, scooter reservation, real-time tracking**. Utilized **Postman** for **API validation** and **Android Studio** for the **mobile app**, verifying the database (**PostgreSQL**) for correct integration between **backend and frontend**.
- **Quantifiable Impact & Risk Mitigation:** Detected **more than 50 incidents** between the **mobile application** and the **Web platform**. Through **exhaustive integration testing**, identified **inconsistencies in order statuses**. Managed defects using **Jira**.

Technologies: Postman, Android Studio, Jira, REST API, SQL (PostgreSQL), Boundary Values, Equivalence Classes.

Web Application Testing – Urban Routes | TripleTen | 2025

- **Strategic User Experience and Web Functionality Validation:** Comprehensive validation of a web application focused on **user experience and functionality**, ensuring the **correct operation of critical flows** across different browsers and **interface stability**.
- **Advanced Test Design and Execution:** Designed and executed **functional test cases** applying rigorous **black-box**

techniques, including **Equivalence Partitioning, Boundary Value Analysis, and Negative Testing**. This allowed for the identification of **vulnerabilities and unexpected behaviors** in order flows. Utilized **DevTools** to monitor the system and detect **network errors** that could affect operation.

- **Quantifiable Impact & Quality Optimization:** Detected and reported **39 total defects** related to **field validations, reservation button functionality, reservation flow logic, and payment method**. After executing a total of **85 tests**, a **45.8% failure rate** was revealed in **critical modules** (Reservation, Payments, and Design), of which **74.3% were high severity**.

Technologies: Chrome DevTools, Jira, Figma, Manual Tests, HTTP, Pairwise Testing.

Web Automation - Selenium | Urban Routes + Urban Grocers | TripleTen | 2025

- **User Flow Simulation:** Automation of taxi requests, from address selection to order confirmation and payment.
- **User Interface (UI) Validation:** Verification of correct interaction with page elements, including input fields, buttons, and selections.
- **Page Object Model (POM) Implementation:** Design of maintainable and scalable tests by separating page elements from test logic.
- **Impact:** A total of 9 tests were executed, of which 5 were successful (Passed) and 4 failed (Failed), representing a pass rate of 55.6%.

Technologies: Selenium WebDriver, Pytest, Git/GitHub, Page Object Model (POM), ChromeDriver, CSS Selectors, XPath, HTML.

Professional Experience

Datzone | Technical Support – AutoZone | Chihuahua, Mexico | (Temporary)

- **Responsibilities:** Provided **bilingual technical support (English)** resolving incidents in internal systems using predefined commands and procedures, ensuring **business operational continuity**. Diagnosed and resolved **performance failures and user configurations**, ensuring a **stable and reliable work environment**. Identified and **escalated critical incidents on store servers**, preventing **data loss** and protecting the **integrity of sales data**.
 - **Achievements:** Detected and resolved **critical IT infrastructure incidents**, preventing **data loss** and ensuring **operational continuity** in multiple branches. **Optimized response times** to system failures through standardized procedures, **reducing operational interruptions**.
-

Teleperformance | Customer Support – FedEx | Chihuahua, MX | (2016–2017)

- **Bilingual support (English)** for **USA and Canada markets**, managing **international shipping logistics** and resolving **critical delivery incidents**.
 - **Achievement:** **Reduced repeated inquiries** through **proactive order tracking**, increasing customer trust and satisfaction. **Proactive**, increasing satisfaction and **minimizing information errors**.
-

Instituto ENLAC | Pediatric Physical Therapist | Cuauhtémoc, MX | (Jan 2026 – Present)

- **Responsibilities:** Provided **specialized physical therapy** to children with disabilities using **rehabilitation methodologies** to promote their motor autonomy; **designed and organized cyclical training programs** to ensure the achievement of **therapeutic objectives**.
 - **Achievements:** Implemented a **structured training system** that **optimized session organization** and facilitated **systematic progress evaluation**, achieving more **personalized and consistent care** for each patient.
-

Education

QA Engineer Bootcamp – TripleTen

Training Completed | Certification JUL/2025 - JAN/2026
